

Model:	Omnia
Version:	V1.062ST/V1.064GD
Issue date:	17 th Jan 2023
Type:	Public

New Features

-

Fixes

- Fix an issue where the unit/playback freezes when decoding and displaying special characters.
- Made an improvement to the GD type MCU standby power consumption.

Additional information

Important! Please check the current version in your Omnia Menu options.

If the version number has GD in the name, please use V1.064 GD.

If the version number does not have GD in the name, please use V1.062 ST.

Update instructions:

1. Switch off the power supply of your Omnia (rear panel mains switch).
2. Copy the required update Omnia folder and firmware file to the root of a FAT32 formatted USB drive (the folder name should be 'Omnia' and the contents should be 'Omnia.bin').
3. Insert the USB drive to the 'UPDATE' USB socket on the rear panel of your Omnia.
4. Push and hold front panel standby button.

5. Switch on the mains power (rear panel mains switch) while continuing to hold the standby button.
6. Release the standby button and the display will show 'upgrade processing'.
7. Allow your Omnia to apply the software update. This may take a few seconds.
8. When the update is complete, your Omnia will go into standby. It is now ready to switch back on and is ready to use.
